2nd December 2016

Dear Chancellor,

Re: Changes to business rates for self-consumes solar power

Solar is the British public's most popular source of energy and one of the cheapest ways to deliver clean power. Investment in renewables needs to treble globally to deliver on the Paris Agreement on climate change, which entered into force this month.

It is therefore disappointing that over the past year major policy changes have led to rooftop solar deployment falling by over 80% in the UK. Instead of stabilising the industry, it has been further jeopardised by surprise business rate rises for organisations that own and supply themselves with solar power. Businesses, schools and others with solar face a sharp 6-8 fold tax hike from next April. If this proceeds it will also restrict future investment in solar rooftops all over the UK and put the British solar industry at a disadvantage, both at home and internationally.

New Ministers have described climate change as 'one of the biggest – if not the biggest – threats to our national and global security'. We agree. It would be extraordinary if the Government penalised businesses and communities for taking positive action. We urge you to stop the solar tax hike.

Yours sincerely,

Paul Barwell, CEO, Solar Trade Association

Lawrence Slade, CEO, Energy UK

Paul Crewe, Head of Sustainability,
Sainsbury's

Jeremy Parsons, Head of Energy &
Renewables, Kingfisher plc

Mary Creagh MP, Chair of the
Environmental Audit Committee
